<sup>4</sup> Nomenclature by SmithGroup, 2008.

	veneer, interior and exterior woodwork and architectural details, and restroom fixtures are historically significant alterations dating from this period. Rear entry vestibules also appear to have been added during the 1930s. The windows were replaced with new wood windows during the 1970s. Rear steps and railings have been added.
Interior Description:	This duplex residential building is two stories with full basement. Each unit's first floor consists of a front entrance vestibule, front hall, living room, dining room, pantry, half bath, kitchen, and rear entrance. The front stair to the second floor is open to the front hall. The rear stair to the second floor is accessed from the kitchen. The second floor contains a stair hall, three bedrooms, closets, and two full three-piece bathrooms. The two main floor levels have fully plastered walls and ceilings. All original plaster and woodwork was removed and replaced in 1935-39. Primary floors are wood some of which are covered with carpet. The entrance vestibule has a quarry tile and ceramic tile wainscot (1935-39). The bathrooms have ceramic tile floor and wainscot (circa 1935-39). The basement is subdivided into several separate rooms and a central hall. Major walls are masonry and there are plastered ceilings throughout.
General Condition:	This building is in fair condition, according to a 2015 report. A condition assessment conducted in 2008 identifies rusted lintels, shifted brick veneer, eroded mortar due to pressure washing, rotted and damaged fascia, no gutters or leaders, roofs in poor condition with deteriorated valleys, missing chimney cricket, bowed roof ridge, front porch roof in poor condition with inadequate flashing, rear porch roof in fair condition, porches in fair condition with missing railings. Foundations are in good condition. The building has suffered additional deterioration since 2008.
Utilities:	Electricity; no gas, heat, air conditioning, or water
Character-defining Features:	Significant exterior features include: Red brick veneer and mortar, brick chimneys, attic fan windows, crown molding, Colonial Revival porch details (including wood columns), paneled wood doors (two) with sidelights, stone window sills, cement parging on porch foundations, overall fenestration pattern and T-plan, side-gable massing. Although windows were replaced outside of the period of significance, their muntin configuration remains a character-defining feature. On the interior, all woodwork, along with colorful tile work in two entrance vestibules and four restrooms, are significant features introduced by the WPA. Fireplaces and surrounds are

	also significant (one fireplace surround is missing). Stairway rails and balustrades are largely intact and are significant features. Many restroom fixtures are lost, but remaining elements are significant.
