

JustAir Air Quality Monitor Risk Assessment

The JustAir TIZ air quality monitor network is a response to residents of the Hubbard-Richard, Corktown, and North Corktown communities expressing the need for access to air quality data in their neighborhoods. The neighborhood associations have expressed their concerns with:

1. Increased development impacting their air quality
2. New businesses impacting their air quality
3. Lack of historic data on air quality
4. Community education and engagement around air quality education

The JustAir TIZ air quality monitor network is a physical network mounted on city street lights and telephone poles.

These monitors collect data and transmit the information to a publicly accessible data dashboard located at justair.app

Residents can sign up for text alerts on the dashboard to receive notifications when the air quality near them changes.
