## EXECUTIVE SUMMARY

The Mannik & Smith Group, Inc. (MSG) was retained by the City of Detroit (COD) to perform sampling and analysis of fill materials at the property commonly addressed as 539 W. Brentwood Street, Detroit, Wayne County, Michigan (hereinafter, the "Site"). The Site location, as referenced to nearby roads and major geographic features, is shown on Figure 1, *Site Location Map*. Figure 2, *Site Layout*, depicts the current layout of the Site.

This Executive Summary is provided to summarize the results of the work performed at the Site. The Executive Summary is general in nature and should not be used to replace or be considered apart from the entirety of this report.

The purpose of the work was to assist the COD's blight remediation efforts with the sampling and analysis of fill material at the Site through soil sample collection from pre-determined depths, as described in the COD's *Sampling and Analysis of Fill Materials Scope of Services*, dated June 17, 2025 and COD's request to include collection of soil samples from 0-1 feet (hereinafter, the "Scope of Work"). Sample analyses associated with this work included volatile organic compounds (VOCs); semi-volatile organic compounds (SVOCs); polychlorinated biphenyls (PCBs); arsenic, barium, cadmium, chromium, copper, lead, mercury, selenium, silver, and zinc (10 Michigan metals); chloride; herbicides; and pesticides. Analytical results were compared to the current generic residential cleanup criteria (GRCC) promulgated under Part 201 of the *Natural Resources and Environmental Protection Act* (NREPA), 1994 P.A. 451, as amended (Part 201).

Pursuant to a request by the COD, MSG has completed sampling and analysis of fill material at the Site, per the Scope of Work. Results of this work, which are subject to the limitations presented in *Appendix A, Limitations*, incorporated by reference herewith, revealed the following:

- The stratigraphy encountered during soil boring advancement of 539 SB01, 539 SB02, 539 SB03, 539 SB04, 539 SB05, 539 SB06, 539 SB07, 539 SB08, 539 SB09, 539 SB10, 539 SB11, and 539 SB12 generally consisted of brown sandy clay underlain by brown sand to six (6) feet below ground surface (Bgs), the maximum depth explored for this investigation. Field photoionization detector (PID) readings of the recovered soil cores were below instrument detection limits. There were no visual (staining) and/or olfactory (e.g., petroleum-like odors) indications of contamination observed during soil sampling activities; however, wood, concrete, brick, and/or asphalt debris were observed in 539 SB01 through 539 SB12.
- Concentrations of arsenic and chromium (Total) were detected in soil samples 539 Wbr SB01 (1-2')\_20260312, 539 Wbr SB02 (0-1')\_20260312, 539 Wbr SB04 (0-1')\_20260312, 539 Wbr SB05 (0-1')\_20260312, 539 Wbr SB06 (3-4')\_20260312, 539 Wbr SB07 (0-1')\_20260312, 539 Wbr SB08 (0-1')\_20260312, 539 Wbr SB10 (0-1')\_20260312, and/or 539 Wbr SB12 (0-1')\_20260312 in excess of their respective Part 201 groundwater surface water interface protection criteria (GSIPC), drinking water protection criteria (DWPC), and/or direct contact criteria (DCC).
- Concentrations of naphthalene were detected in soil sample 539 Wbr SB03 (0-1')\_20260312 in excess of soil volatilization to indoor air pathway (SVIAP).
- Concentrations of 1-methylnaphthalene, 2-methylnaphthalene, 3 & 4-methylphenol, 4,4'-DDE, acenaphthene, acenaphthylene, anthracene, barium, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, bis(2-ethylhexyl) phthalate, chlordane, technical, chloride, chrysene, copper, cresols (Total), fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, lead, mercury, naphthalene, phenanthrene, pyrene, and zinc were detected in soil samples 539 Wbr SB01 (1-2')\_20260312, 539 Wbr SB02 (0-1')\_20260312, 539 Wbr SB03 (0-1')\_20260312, 539 Wbr SB04 (0-1')\_20260312, 539 Wbr SB05 (0-1')\_20260312, 539 Wbr SB06 (3-4')\_20260312, 539 Wbr SB07 (0-1')\_20260312, 539 Wbr SB08 (0-1')\_20260312, 539 Wbr SB09 (0-1')\_20260312, 539 Wbr SB10 (0-1')\_20260312, 539 Wbr SB11 (5-6')\_20260312, and/or 539 Wbr SB12 (0-1')\_20260312 at concentrations above laboratory method detection limits; however, detected concentrations were below their respective Part 201 GRCC and/or Statewide Default Background Levels.

- VOCs, PCBs, and herbicides were not detected above laboratory method detection reporting limits.
- Groundwater was not encountered during soil boring activities completed as part of this investigation. Groundwater is not utilized as drinking water at or near the Site, as municipal water is supplied via the COD, and the general geology of the Site and surrounding area consists of fill materials underlain by clay overlying bedrock. Therefore, the drinking water (DW) exposure pathway can be considered not applicable. Additionally, groundwater was not encountered during this investigation to transport contaminants to either storm sewers or surface water and the clay layer also inhibits migration, therefore, the groundwater surface water exposure pathway can be considered not applicable. Since the building on site has been razed, the SVIAP is not currently complete, however, consideration may need to be given to this pathway if future construction is planned. Given that the site is residential, exceedances of direct contact criteria may merit further consideration.

MSG has evaluated the analytical results of the fill material. Based upon the analytical results, we have determined that the material is contaminated above the state's Part 201 GRCC, as applicable.

MSG warrants that no substantive information or documentation was deleted, omitted, or changed that would otherwise cause the MSG to reach a different conclusion. Furthermore, MSG understands that the COD and its agencies and authorities may rely upon the overall completeness, accuracy, and conclusions in this report and hereby provides reliance on the contents presented herein.

## 1.0 INTRODUCTION

The Mannik & Smith Group, Inc. (MSG) was retained by the City of Detroit (COD) to conduct sampling and analysis of fill materials at the property commonly addressed as 539 W. Brentwood Street, Detroit, Wayne County, Michigan (hereinafter, the "Site"). The Site location as referenced to nearby roads and major geographic features is presented as *Figure 1, Site Location Map*. *Figure 2, Site Layout*, depicts the current layout of the Site.

The purpose of this work was to assist the COD's blight remediation efforts with the sampling and analysis of fill material at the Site through soil sample collection from pre-determined depths. The scope of work for this investigation was performed in general accordance with the COD's *Sampling and Analysis of Fill Materials Scope of Services*, dated June 17, 2025, and COD's request to include collection of soil samples from 0-1 feet (hereinafter, the "Scope of Work"). This report presents the findings of this investigation. Soil samples were collected by MSG March 12, 2026. The findings of this report are valid as of the report date, subject to the limitations presented in *Appendix A, Limitations*.

At the time of this investigation, the Site was vacant and formerly occupied by residential structures. Former Site building(s) had been demolished as part of the Blight Removal Program prior to commencement of this work.

## 2.0 PURPOSE AND SCOPE OF WORK

The purpose of the work was to assist the COD's blight remediation efforts with the sampling and analysis of fill material at the Site through soil sample collection from pre-determined depths, as described per the Scope of Work, and modified in the field (when necessary) based on encountered conditions and professional judgment of the MSG field geologist.

MSG performed the following Scope of Work:

- Advanced 12 onsite soil borings to a maximum depth of six feet below ground surface (bgs) utilizing a direct push drill rig at the locations depicted on Figure 2.
- Collected one (1) discrete soil sample for laboratory analysis from each soil boring at a depth of 0-1 feet bgs, 1-2 feet bgs, 3-4 feet bgs, or 5-6 feet bgs, depending on the soil boring.
- Submitted soil samples to an independent analytical laboratory for chemical analysis.
- Prepared this report summarizing the activities and results of this work.

Per the Scope of Work, sample analyses included volatile organic compounds (VOCs); semi-volatile organic compounds (SVOCs); polychlorinated biphenyls (PCBs); arsenic, barium, cadmium, chromium, copper, lead, mercury, selenium, silver, and zinc (10 Michigan metals); chloride; herbicides; and pesticides. Soil sample analytical results were compared to the current generic residential cleanup criteria (GRCC) promulgated under Part 201 of the *Natural Resources and Environmental Protection Act* (NREPA), 1994 P.A. 451, as amended (Part 201).

## 3.0 SITE ASSESSMENT METHODOLOGY

The following subsections describe the methodologies employed by MSG at the Site during sampling activities that were conducted on March 12, 2026. A daily field activity report prepared by MSG is presented in *Appendix B, Daily Field Report*.

### 3.1 Preliminary Site Work Activities

Prior to conducting subsurface soil sampling activities, MSG contacted the MISSDIG utility locating system to identify and physically mark underground utilities. If necessary, proposed soil boring locations were modified based on the results of the utility markings. Additionally, MSG reviewed readily available Site building records or documents to ensure that this scope of work was conducted on the correct property and in the areas of the former Site structure.

### 3.2 Soil Sample Collection

The sampling plan for the Site was based on the Scope of Work and modified in the field (if necessary) based on encountered conditions and professional judgment of MSG's field personnel. MSG advanced 12 soil borings, designated 539 SB01, 539 SB02, 539 SB03, 539 SB04, 539 SB05, 539 SB06, 539 SB07, 539 SB08, 539 SB09, 539 SB10, 539 SB11, and 539 SB12, using a direct push drill rig at the locations depicted on Figure 2. Photographs collected during the completion of this work are provided in *Appendix C, Investigation Photographs*.

Soils were continuously profiled at each soil boring location from the ground surface to the termination depth of six feet bgs using a 5-foot long, closed-piston Macro-Core® sampling device. A new disposable high-density polyethylene (HDPE) liner was placed within the sampler between each 5-foot sample interval. The recovered soil samples were examined and logged in the field by the MSG field geologist. The soils were classified by MSG's field geologist in general accordance with ASTM D 2488, *Standard Practice for Description and Identification of Soils (Visual-Manual Procedure)*. Soil descriptions were based on visual examination and interpretation by the field geologist.

Soil samples were examined for visual and olfactory indications of impact in accordance with the Scope of Work and were continuously screened upon retrieval of each sample interval with a MiniRAE 10.6 electron volt (eV) photoionization detector (PID) calibrated with isobutylene span gas. The PID measures the concentration of airborne ionizable gasses and vapors and automatically displays any detected concentrations in parts per million (ppm). The PID measures total concentrations of VOC vapors present and cannot distinguish between individual VOC constituents. PID readings for each sample interval were recorded on the individual soil boring logs, which are included in *Appendix D, Soil Boring Logs*.

Soil samples were collected in general accordance with the Scope of Work. The soil samples were placed into appropriate pre-preserved and unpreserved laboratory-supplied sample containers, as appropriate for the associated laboratory analyses. Soil samples collected for VOC analysis were placed in laboratory supplied pre-tared 40-milliliter (ml) vials with septum-sealed threaded caps that were pre-preserved with methanol provided by the analytical laboratory. Groundwater was not encountered during the investigation.

### 3.3 Decontamination

Before initiation of sampling and drilling activities and between each sampling/soil boring, equipment was cleaned to avoid the potential for cross-contamination during field activities. Pertinent equipment and tooling were thoroughly cleaned using a phosphate-free soap to remove chemical residue and caked-on soils. After sample collection was completed, each soil boring location was abandoned with the soil cuttings generated at each soil boring location and finished to match the original surface.

### 3.4 Analytical Methods

A total of 12 soil samples designated 539 Wbr SB01 (1-2')\_20260312, 539 Wbr SB02 (0-1')\_20260312, 539 Wbr SB03 (0-1')\_20260312, 539 Wbr SB04 (0-1')\_20260312, 539 Wbr SB05 (0-1')\_20260312, 539 Wbr SB06 (3-4')\_20260312, 539 Wbr SB07 (0-1')\_20260312, 539 Wbr SB08 (0-1')\_20260312, 539 Wbr SB09 (0-1')\_20260312, 539 Wbr SB10 (0-1')\_20260312, 539 Wbr SB11 (5-6')\_20260312, and 539 Wbr SB12 (0-1')\_20260312, were collected as part of this investigation. These soil samples were submitted to ALS Environmental Laboratory (ALS) in Holland, Michigan for laboratory analysis of the following parameters per the requested parameters as described in the Scope of Work:

- VOCs by United States Environmental Protection Agency (USEPA) Method SW8260D;
- SVOCs by USEPA Method SW8270E;
- PCBs by USEPA Method SW8082A;
- 10 Michigan metals by USEPA Method SW6020B and SW7471B;
- Chloride by USEPA Method SW9056A;
- Herbicides by USEPA Method SW8151A; and
- Pesticides by USEPA Method SW8081B.

### 3.5 Quality Assurance/Quality Control

Quality assurance and quality control (QA/QC) was achieved in the field by using MSG's standard operating procedures (SOPs) for sample collection, sample screening, sample preservation, and chain-of-custody protocols to ensure sample integrity. Per the Scope of Work, duplicate soil samples and field blanks were not collected at this site.

Laboratory QC was achieved by using standard analytical methods, the analyses of spiked and laboratory quality control samples, and the use of internal laboratory quality assurance protocols. Review of the laboratory's QC data indicated the validity of the data and that it is able to be used for assessing soil samples collected during this work.

## 4.0 SUMMARY OF RESULTS

The following subsections include a discussion of the soil samples that were collected from the Site on March 12, 2026.

### 4.1 Site Geology and Hydrogeology

The stratigraphy encountered during soil boring advancement of 539 SB01, 539 SB02, 539 SB03, 539 SB04, 539 SB05, 539 SB06, 539 SB07, 539 SB08, 539 SB09, 539 SB10, 539 SB11, and 539 SB12 generally consisted of brown sandy clay underlain by brown sand to six (6) feet bgs, the maximum depth explored for this investigation. Field PID readings of the recovered soil cores were below instrument detection limits. There were no visual (staining) and/or olfactory (e.g., petroleum-like odors) indications of contamination observed during soil sampling activities; however, wood, concrete, brick, and/or asphalt debris were observed in 539 SB01 through 539 SB12.

Groundwater was not encountered during soil boring activities completed as part of this investigation.

### 4.2 Soil Sample Analytical Results

Twelve (12) soil samples, designated 539 Wbr SB01 (1-2')\_20260312, 539 Wbr SB02 (0-1')\_20260312, 539 Wbr SB03 (0-1')\_20260312, 539 Wbr SB04 (0-1')\_20260312, 539 Wbr SB05 (0-1')\_20260312, 539 Wbr SB06 (3-4')\_20260312, 539 Wbr SB07 (0-1')\_20260312, 539 Wbr SB08 (0-1')\_20260312, 539 Wbr SB09 (0-1')\_20260312, 539 Wbr SB10 (0-1')\_20260312, 539 Wbr SB11 (5-6')\_20260312, and 539 Wbr SB12 (0-1')\_20260312, were collected from the Site and submitted to ALS for laboratory analysis of VOCs, SVOCs, PCBs, Michigan 10 Metals, chloride, herbicides, and pesticides.

The analytical results and comparisons to applicable Part 201 GRCC are summarized in *Table 1, Soil Sample Analytical Detection Summary*. Copies of the laboratory analytical data reports and chain of custody forms are included in *Appendix E, Laboratory Analytical Reports and Chain of Custody Forms*.

A summary of the soil sample analytical detections in excess of Part 201 GRCC is provided below:

| Chemical         | CAS Number | Soil Sample (feet bgs)                                                                                                                                                                                                                                                              | Part 201 GRCC Exceeded / Concentration (µg/kg <sup>1</sup> )                        | Maximum Detected Concentration (µg/kg) |
|------------------|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------|----------------------------------------|

<sup>3</sup>DWPC – Drinking Water Protection Criteria

<sup>4</sup>DCC – Direct Contact Criteria

### 4.3 Exposure Evaluation

MSG has completed a preliminary evaluation for the Site and associated exposure pathways. Cleanup criteria are applicable if it is reasonable and relevant for the corresponding exposure pathway to be or become complete.

Groundwater was not encountered during soil boring activities completed as part of this investigation. Groundwater is not utilized as drinking water at or near the Site, as municipal water is supplied via the COD, and the general geology of the Site and surrounding area consists of fill materials underlain by clay overlying bedrock. Therefore, the drinking water (DW) exposure pathway can be considered not applicable. Additionally, groundwater was not encountered during this investigation to transport contaminants to either storm sewers or surface water and the clay layer also inhibits migration, therefore, the groundwater surface water exposure pathway can be considered not applicable. Since the building on site has been razed, the SVIAP is not currently complete, however, consideration may need to be given to this pathway if future construction is planned. Given that the site is residential, exceedances of direct contact criteria may merit further consideration.

## 5.0 FINDINGS

MSG has evaluated the analytical results of the fill material samples collected at the Site in general accordance with the Scope of Work. The findings of this investigation are presented below:

- The stratigraphy encountered during soil boring advancement of 539 SB01, 539 SB02, 539 SB03, 539 SB04, 539 SB05, 539 SB06, 539 SB07, 539 SB08, 539 SB09, 539 SB10, 539 SB11, and 539 SB12 generally consisted of brown sandy clay underlain by brown sand to six (6) feet bgs, the maximum depth explored for this investigation. Field PID readings of the recovered soil cores were below instrument detection limits. There were no visual (staining) and/or olfactory (e.g., petroleum-like odors) indications of contamination observed during soil sampling activities; however, wood, concrete, brick, and/or asphalt debris were observed in 539 SB01 through 539 SB12.
- Concentrations of arsenic and chromium (Total) were detected in soil samples 539 Wbr SB01 (1-2')\_20260312, 539 Wbr SB02 (0-1')\_20260312, 539 Wbr SB04 (0-1')\_20260312, 539 Wbr SB05 (0-1')\_20260312, 539 Wbr SB06 (3-4')\_20260312, 539 Wbr SB07 (0-1')\_20260312, 539 Wbr SB08 (0-1')\_20260312, 539 Wbr SB10 (0-1')\_20260312, and/or 539 Wbr SB12 (0-1')\_20260312 in excess of Part 201 GSIPC, DWPC, and/or DCC.

- Concentrations of naphthalene were detected in soil sample 539 Wbr SB03 (0-1')\_20260312 in excess of SVIAP.
- Concentrations of 1-methylnaphthalene, 2-methylnaphthalene, 3 & 4-methylphenol, 4,4'-DDE, acenaphthene, acenaphthylene, anthracene, barium, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(g,h,i)perylene, benzo(k)fluoranthene, bis(2-ethylhexyl) phthalate, chlordane, technical, chloride, chrysene, copper, cresols (Total), fluoranthene, fluorene, indeno(1,2,3-cd)pyrene, lead, mercury, naphthalene, phenanthrene, pyrene, and zinc were detected in soil samples 539 Wbr SB01 (1-2')\_20260312, 539 Wbr SB02 (0-1')\_20260312, 539 Wbr SB03 (0-1')\_20260312, 539 Wbr SB04 (0-1')\_20260312, 539 Wbr SB05 (0-1')\_20260312, 539 Wbr SB06 (3-4')\_20260312, 539 Wbr SB07 (0-1')\_20260312, 539 Wbr SB08 (0-1')\_20260312, 539 Wbr SB09 (0-1')\_20260312, 539 Wbr SB10 (0-1')\_20260312, 539 Wbr SB11 (5-6')\_20260312, and/or 539 Wbr SB12 (0-1')\_20260312 at concentrations above laboratory method detection limits; however, detected concentrations were below their respective Part 201 GRCC and/or Statewide Default Background Levels.
- VOCs, PCBs, and herbicides were not detected above laboratory method detection reporting limits.
- Groundwater was not encountered during soil boring activities completed as part of this investigation. Groundwater is not utilized as drinking water at or near the Site, as municipal water is supplied via the COD, and the general geology of the Site and surrounding area consists of fill materials underlain by clay overlying bedrock. Therefore, the drinking water (DW) exposure pathway can be considered not applicable. Additionally, groundwater was not encountered during this investigation to transport contaminants to either storm sewers or surface water and the clay layer also inhibits migration, therefore, the groundwater surface water exposure pathway can be considered not applicable. Since the building on site has been razed, the SVIAP is not currently complete, however, consideration may need to be given to this pathway if future construction is planned. Given that the site is residential, exceedances of direct contact criteria may merit further consideration.

MSG has evaluated the analytical results of the fill material. Based upon the analytical results, we have determined that the material is contaminated above the state's Part 201 GRCC, as applicable.

MSG warrants that no substantive information or documentation was deleted, omitted, or changed that would otherwise cause the MSG to reach a different conclusion. Furthermore, MSG understands that the COD and its agencies and authorities may rely upon the overall completeness, accuracy, and conclusions in this report and hereby provides reliance on the contents presented herein.

Notes

Only parameters with one or more detections are shown.

ug/kg = Micrograms per Kilogram.

Exceeds Generic Drinking Water Protection Criteria.

Exceeds Groundwater Surface Water Interface Protection Criteria.

Exceeds Applicable Soil Vapor Inhalation Criteria/Screening Levels.

Exceeds Two or More DWPC, GSIPC, and/or Applicable Soil Vapor Inhalation Criteria/Screening Levels.

Exceeds PSIC, DCC, and/or Csat, likely exceeds others.

**Bold** indicates concentration above laboratory reporting limits.

NC = No Criteria; NA = Not Applicable; NLV = Not Likely to Volatize; NLL = Not Likely to Leach.

Part 201 GSIPC Hardness specific criteria (G) calculated using a regional hardness value  
of the lower portion of the lower peninsula, 150 mg CaCO3/L.

Notes in parentheses and standard abbreviations from Part 201 Rules 299.1  
through 299.50, updated October 12, 2023.

Notes

Only parameters with one or more detections are shown.

ug/kg = Micrograms per Kilogram.

Exceeds Generic Drinking Water Protection Criteria.

Exceeds Groundwater Surface Water Interface Protection Criteria.

Exceeds Applicable Soil Vapor Inhalation Criteria/Screening Levels.

Exceeds Two or More DWPC, GSIPC, and/or Applicable Soil Vapor Inhalation Criteria/Screening Levels.

Exceeds PSIC, DCC, and/or Csat, likely exceeds others.

**Bold** indicates concentration above laboratory reporting limits.

NC = No Criteria; NA = Not Applicable; NLV = Not Likely to Volatize; NLL = Not Likely to Leach.

Part 201 GSIPC Hardness specific criteria (G) calculated using a regional hardness value

of the lower portion of the lower peninsula, 150 mg CaCO3/L.

Notes in parentheses and standard abbreviations from Part 201 Rules 299.1

through 299.50, updated October 12, 2023.

## APPENDIX A

### LIMITATIONS

## LIMITATIONS

This investigation and related documentation are site-specific, which means they pertain to the environmental conditions of the Site only.

The Mannik & Smith Group, Inc. (MSG) performed its services associated with the investigation in conformance with the care and skill ordinarily used by other reputable environmental consulting firms practicing under similar conditions, at the same time, and in the same or similar locality. In preparing this report, MSG may have relied on information obtained from or provided by others. MSG makes no representation or warranty regarding the accuracy or completeness of this information gathered through outside sources or subcontracted services. No warranty, guarantee, or certification of any kind, expressed or implied, at common law or created by statute, is extended, made, or intended by rendering these environmental consulting services or by furnishing this written report. Environmental conditions and regulations are subject to constant change and reinterpretation. One should not assume that any on-site conditions and/or regulatory statutes or rules will remain constant after MSG has completed the scope of work for this project. Furthermore, because the facts stated in these reports are subject to professional interpretation, differing conclusions could be reached by other environmental professionals.

Contaminants may be hidden in subsurface material, covered by pavement, vegetation, or other substances. Additionally, contamination may not be present in predictable locations. MSG has prepared a logical investigation program to reduce the client's risk of discovering unknown contamination. This risk may be reduced by more extensive exploration on the Site. Even with additional exploration, it is not possible to completely eliminate the risk of discovering contamination on the Site. It can not be assumed that samples collected and conditions observed are representative of an area that has not been sampled and/or tested.

Some environmental assessments are undertaken to satisfy "due diligence", "all appropriate inquiry," or other regulatory requirements provided in federal, state, or local law. Although MSG strives to investigate a site in accordance with the scope of work as defined by written agreement with a client, it cannot warrant that the work undertaken for this report with satisfy "due diligence", "all appropriate inquiry," or any other similar standard under any federal, state, or local law.

Due to changing environmental regulatory conditions and potential on-site activities after the completion of investigation, the client may rely upon the conditions within this investigation report for a period of six months from the report's issuance date.

## APPENDIX B

DAILY FIELD REPORT

## DAILY FIELD REPORT

**Client:** City of Detroit Demolition Department  
**Project:** Sampling and Analysis of Fill Material

**Report No.:** 1  
**Job No.:** DETR0060

Re: **539 W Brentwood**

Date Received: **03/13/2026**

Work Order: **HN2603931**

Dear Ryan,

Enclosed are the results of the sample(s) submitted to our laboratory.

The analytical data provided relates directly to the samples received by ALS Environmental - Holland and for only the analyses requested.

Sample results are compliant with industry accepted practices and Quality Control results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

If you have any questions regarding this report, please feel free to contact me:

ADDRESS: 3352 128th Avenue, Holland, MI, USA PHONE: +1 (616) 399-6070 FAX: +1 (616) 399-6185

**Kathy Jones-Gronda**

/S/ KATHY JONES-GRONDA

**Project Manager**

**Client:** The Mannik & Smith Group, Inc.  
**Project:** 539 W Brentwood

**Work Order:** HN2603931  
**Date Received:** 13-Mar-2026

## CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier II level requested by the client.

### Sample Receipt

12 soil/solid samples were received for analysis at ALS Environmental on 13-Mar-2026. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

### WorkOrder: HN2603931

Soil/solid results are reported on a dry-weight basis, corrected using laboratory-determined percent moisture content, unless explicitly identified otherwise.

### Organics

#### EPA 8260D-FULL HN-5035A-10mL-S

##### Run ID: 3956460

- The following analytes failed calibration refit conditions. All samples in this batch were non-detect. No qualification is necessary for these analytes: chloroethane

##### Run ID: 3956769

- QC-2492154: The MSD recovery was below the lower control limit. The corresponding result in the parent sample may be biased low for the following analyte(s): 1,1,2,2-tetrachloroethane
- QC-2492154: The MS recovery was above the upper control limit. The corresponding result in the parent sample was non-detect, therefore no qualification is necessary: see QC report
- QC-2492154: The MS recovery was below the lower control limit. The corresponding result in the parent sample may be biased low for this analyte: 1,1,2,2-tetrachloroethane
- QC-2492154: The MSD recovery was above the upper control limit. The corresponding result in the parent sample was non-detect, therefore no qualification is necessary. see QC report
- QC-2492154; The LCS recovery was below the lower control limit. Instrument sensitivity was verified as sufficient through the analysis of a low-level standard. The following non-detects are reported without qualification: trichloroethene
- The following analytes failed calibration refit conditions. All samples in this batch were non-detect. No qualification is necessary for these analytes: chloroethane

#### EPA 8270E-FULL HN-3546-S

##### Run ID: 3961577

- The LCS recovery was below the lower control limit. The sample results for this batch may be biased low for this analyte: Benzaldehyde.
- HN2603931-001, -002, and -004 through -007: The reporting limit is elevated due to dilution needed to eliminate matrix-related interference.

##### Run ID: 3961590

- The MSD recovery was above the upper control limit. The corresponding result in the parent sample may be biased high for this analyte: 4-Terphenyl-d14.
- The MS recovery was above the upper control limit. The corresponding result in the parent sample may be biased high for this analyte: 4-Terphenyl-d14
- 4-Terphenyl-d14 failed surrogate criteria high in the method blank, biasing base/neutral results high. The blank was non-detect; therefore, no qualifications are necessary.
- 4-Terphenyl-d14 failed surrogate criteria high in the LCS, biasing base/neutral results high.
- HN2603931-009 through -011: The reporting limit is elevated due to dilution needed to eliminate matrix-related interference.

**EPA 8081B-3546-S (High)**

**Run ID: 3958010**

- HN2603931-006: The RPD between the sample results on the primary and confirmation columns exceeded 40%. The higher result was reported for: cis-Chlordane

**Metals**

**EPA 6020B-3050B-S**

**Run ID: 3951984**

- HN2603931-001 through -003: The reporting limits are elevated for Cd, Se and Ag due to the dilutions needed for high concentrations of non-target analytes.

**Run ID: 3954985**

- HN2603931-004 through -012: The reporting limits are elevated for Cd, Se and Ag due to the dilutions needed for high concentrations of non-target analytes.

## SAMPLE DETECTION SUMMARY

This form includes only detections above the limits as presented.

For a full listing of sample results, continue to the Sample Results section of this Report.

## ALS Holland Sample Receiving Checklist

Received by: Diane F. Shaw

Date/Time: 3/13/26 0700

Carrier Name: QS

Shipping container/cooler in good condition? (Yes) / No / Not Present

Custody seals intact on shipping container/cooler? Yes / No / (Not Present)

Custody seals intact on sample bottles? Yes / No / (Not Present)

Chain of Custody present? (Yes) / No

COC signed when relinquished and received? (Yes) / No

COC agrees with sample labels? (Yes) / No

Samples in proper container/bottle? (Yes) / No

Sample containers intact? (Yes) / No

Sufficient sample volume for indicated test? (Yes) / No

All samples received within holding time? (Yes) / No

Container/Temp Blank temperature in compliance? (Yes) / No

Temperature(s) (°C): 3.2 / 3.2 °C

Thermometer(s): 1 R6

Sample(s) received on ice? (Yes) / No

Matrix/Matrices: Solid

Cooler(s)/Kit(s): 1

Date/Time sample(s) sent to storage: 3/13/26 0900

Water – VOA vials have zero headspace? Yes / No / (No Vials)

Water – pH acceptable upon receipt? Yes / No / (N/A)

pH strip lot #: \_\_\_\_\_ < 2 \_\_\_\_\_ > 12 \_\_\_\_\_ Other \_\_\_\_\_

pH adjusted (note adjustments below)? Yes / No / (N/A)

pH adjusted by: \_\_\_\_\_

## REPORT QUALIFIERS AND DEFINITIONS

|    |                                                                                                                                                                     |
|----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| *  | Value exceeds Regulatory Limit (if MCL displayed)                                                                                                                   |
| a  | Analyte is non-accredited                                                                                                                                           |
| B  | Analyte detected in the associated Method Blank above the Method criteria                                                                                           |
| E  | Value above quantitation range                                                                                                                                      |
| H  | Analyzed outside of Holding Time                                                                                                                                    |
| J  | Analyte is present at an estimated concentration between the MDL and Report Limit                                                                                   |
| NC | Not Calculated                                                                                                                                                      |
| ND | Not Detected at the Reporting Limit                                                                                                                                 |
| O  | Sample amount is > 4 times amount spiked                                                                                                                            |
| P  | Dual Column results percent difference > 40%                                                                                                                        |
| R  | RPD above laboratory control limit                                                                                                                                  |
| S  | Spike Recovery outside laboratory control limits                                                                                                                    |
| U  | Analyzed but not detected above the MDL                                                                                                                             |
| V  | The Continuing Calibration Verification was outside of control criteria                                                                                             |
| X  | Analyte was detected in the Method Blank between the MDL and Reporting Limit, sample results may exhibit background or reagent contamination at the observed level. |
