

Description of Project 2233 Park

- Replace existing mesh banner (480"x336") with a new off premise advertising banner in conjunction with the city sign permit application
- New vinyl mesh to match existing mesh (480"x336")
- Sign hardware, anchors and wiring is existing. Scope is to print a new banner and switch out the mesh.

2233 Park Ave Side/North

2233 Park Ave Front/East

2233 Park Ave Side/South

2233 Park Existing Banner (on premise ad)

Description of Existing Conditions

- The current wall is common brick within poured concrete pillars
- Current sign is 480"x336" and printed on vinyl mesh with reinforced hems and grommets attached to galvanized wires, clips and angle brackets attached to the brick with approximately 68 existing penetrations of ¼" tapcon screws
- The new project is OFF-PREMISES advertising. We have applied to the city for a permit and are currently gathering the necessary details, and permits
- Replacement is required because advertisers will be changing copy as they purchase space.
- The new materials for the sign faces changes will be consistent with existing

Application Specs of Current hardware. Penetrations approx. every 2' (68) around perimeter (rendering is a depiction of what is existing)
