GENERAL STRUCTURAL NOTES

 The structural notes are intended to augment the drawings and specifications. Should conflicts exist between the Drawings, Specifications and the Structural notes, the strictest provision shall govern.

Electrical, Civil/Site drawings and Specifications. Contractor shall coordinate the Structural drawings with the

- Drawings, Specifications and the Structural notes, the strictest provision shall govern.

 2. The Structural drawings form an integral part of Contract Documents, which include Architectural, Structural, Mechanical,
- requirements shown in the other components of the Contract Documents.

 Typical details and other sections/details apply to conditions that are similar to the conditions described in the
- The Contractor shall be responsible for means, methods, sequences and procedures of construction.

sections/details, even if they are not specifically referenced on the plans.

- 5. The structure is designed to be self_supporting and stable after it is fully completed per requirements of Contract Documents. Contractor shall determine erection procedures and sequence, and ensure the safety of the building and its component parts during erection. This includes the addition of temporary bracing, guys or tie_downs if necessary. Contractor shall retain ownership of such material after completion of the project.
- Construction shall comply fully with the applicable provisions of OSHA and the local Governing Codes, current edition, and all requirements specified in the codes shall be adhered to as if they were called for or shown on the drawings. This shall not be construed to mean that requirements set forth on the drawing may be modified because they are more stringent than the code requirements or because they are not specifically required by code.
- . Governing Building Code Michigan (International) Building Code 2015. Standards listed in structural note sections refer to the version and effective date identified in the REFERENCED STANDARDS Chapter in the Governing Building
- 8. Work constructed per these drawings shall be inspected by an Independent Testing Agency retained to ensure compliance with the requirements shown on the Drawings. Special Inspections required by the Governing Building Code, local building department and the Contract Documents shall be performed by a qualified Special Inspector. Project site visits by the Engineer do not constitute or replace inspection.
- For multi-story Wood construction, flexible joints for architectural, electrical, mechanical, and plumbing work between floors shall be used to eliminate potential issues due to structure movement from wood shrinkage.

SHORING AND BRACING

- Contractor shall provide temporary shoring and bracing of existing construction, new construction, and underground utilities as follows:
- a. Where shown or noted on the Drawings.
- b. Where existing construction is to be altered or disturbed until permanent support is in place.
- c. Where existing construction is not undergoing alteration and is to remain undisturbed but is disturbed as a result of the work of this contract.
- d. As required for safe erection, installation of new construction, equipment, etc.
- e. When needed for Contractor's "means and methods" of construction and other safety related issues.
- 2. Shoring and bracing shown on the Drawings is conceptual. Contractor shall be responsible for verifying existing conditions, shoring and bracing calculations, methods of installation, transfer of loads through to final load support, and work sequence phasing with new construction.
- 3. Shoring and bracing shall be performed by a Contractor with minimum 5 years demonstrated experience in similar size and scope of shoring and bracing projects.
- Shoring and bracing shall be designed by a Professional Engineer registered in the State of the Project with minimum 5 years demonstrated experience in similar size and scope of shoring and bracing projects. Design loads and methods shall conform to applicable codes. Soil and material strengths shall be verified by tests, unless conservative estimates that do not affect deflections and deformations are approved by the Architect/Structural Engineer.
- 5. Contractor shall submit drawings and calculations sealed and signed by the Contractor's Professional Engineer showing complete design including temporary conditions, final conditions and sequence of work.
- 6. Before starting work, Contractor shall perform condition survey of the existing building structure, exterior façade and interior finishes, including photographic documentation and submit survey to the Owner for record.
- 7. During the shoring and bracing operations, Contractor shall:
- a. Keep the existing and new construction in a safe condition.
- b. Monitor existing and new construction to detect any signs of distress or deformation.
- c. Take immediate steps to prevent distress, deformation or damage.
- 8. Contractor shall continuously monitor the shoring and bracing system. Contractor shall review and ascertain that all field connections are completed according to the Contractor's design and issue approval for inspection of the work by the Testing Agency.
- After completion of shoring and bracing and completion of work requiring shoring and bracing, Contractor shall repair any damage to the existing and new construction, without any cost to the Owner, and to the satisfaction of the Owner and Architect/Structural Engineer.

EXISTING CONSTRUCTION

commencing work.

- Contractor shall visit the site and become familiar with the existing conditions.
- Existing building dimensions and conditions shown are based upon original drawings or partial survey and have not been completely field verified. The Owner and Architect/Structural Engineer take no responsibility for the accuracy of existing dimensions shown. Contractor shall field measure existing dimensions prior to shop drawing preparation and fabrication.
- Contractor shall verify conditions covering or affecting the structural work; obtain and verify all dimensions and elevations to ensure the proper strength, fit and location of the structural work; report to the Architect/Structural Engineer any and all conditions/discrepancies which may interfere with or otherwise affect or prevent the proper execution and completion of the new work in compliance with the Construction Documents. All discrepancies shall be fully resolved prior to

 4.
- 4. Existing construction not undergoing alteration is to remain undisturbed. Where such construction is disturbed as a result of the operations of this contract, Contractor shall repair or replace as required and to the satisfaction of the Architect/Structural Engineer and Owner's Representative.
- 5. Contractor shall verify the existence, location and elevation of existing utilities, sewers, drains, etc. in demolition areas before proceeding with the work. All discrepancies shall be documented and reported to the Architect/Structural Engineer and Owner's Representative for resolution.
- 6. Should uncharted piping or other utilities be encountered during excavation, Contractor shall consult the Architect/Structural Engineer and Owner's Representative for resolution.
- 7. Contractor shall provide fire watch during field cutting and welding operations, meeting the Owner's requirements.
- 8. Contractor shall provide temporary protection of existing equipment during execution of work, satisfying the Owner's requirements.
- 9. Contractor shall provide temporary protection to prevent damage from the weather and vandalism.
 10. Contractor shall coordinate work with the Owner's personnel to avoid any interference in their operations.
- 11. Refer to SHORING AND BRACING notes for additional requirements.

STRUCTURAL STEEL

- 1. Design, fabrication and erection of structural steel shall be in accordance with the American Institute of Steel Construction (AISC) 360 Specification for Structural Steel Buildings and the Steel Construction Manual, Allowable Strength Design
- 2. Structural steel shall conform to the following ASTM specifications and minimum yield strength:

W-Shapes	A992	Fy = 50 ksi
Tubes	A500 Gr.B	Fy = 46 ksi
Miscellaneous shapes and plates	A36	Fv = 36 ksi

- 3. Anchor rods shall conform to ASTM F1554 Grade 36, unless noted Grade 55 or other on Drawings.
- 4. Structural steel bolting shall be ASTM A325 type N, 3/4" diameter snug tight except where other size, ASTM A490 N, pretensioned or slip-critical type bolts are indicated.
- 5. Shear connectors shall conform to the requirements of "Structural Welding Code Steel" of the American Welding Society, ANSI/AWS D1.1, Fu = 65 ksi, as manufactured by Nelson Stud Welding, Div. of TRW, or approved substitute,
- and welded as per Manufacturer's written instructions.
 Welding shall be done with appropriate E70 series electrodes compatible with the new and existing steel. Welds and welding procedures shall conform to, and welders shall be qualified in accordance with, the "Structural Welding Code -
- Steel" of the American Welding Society, ANSI/AWS D1.1.

 7. Detailing shall be performed using rational engineering design and standard practice in accordance with the Contract Documents. The typical details shown are approximate only and do not indicate the required number of bolts or weld
- 8. Fabricator shall be AISC Certified or have an AISC equivalent Quality Assurance program as certified by a qualified
- independent testing agency.

 9. The length, dimension and connection detail from new structural member to existing structures shall be field verified
- before fabrication. Field modifications to the fabricated member or connection are not allowed without prior approval by the Structural Engineer. Contractor shall submit sketches or shop drawings detailing proposed modifications for approval.
- 10. Contractor shall install A325 and A490 bolts in accordance with the "Specification for Structural Joints Using ASTM A325 or A490 Bolts." Snug tight condition shall be achieved using an impact wrench, to bring the connected plies into firm contact, except where noted as slip-critical, pre-tensioned or finger tight.
- 11. Structural steel shall be primed.

sizes, unless specifically noted.

- 12. Contractor shall control erection procedures and sequences with relation to temperature differentials, especially with respect to structural steel framing into concrete walls, beams or columns.
- 13. Contractor shall provide temporary bracing as required to ensure stability of the structure under full design loads until the permanent bracing is in place. Provide necessary shoring where required during construction.
- 14. Welding shall be inspected by an AWS Certified Welding Inspector (CWI).
- 15. Contractor shall schedule work to allow the above testing requirements to be completed.

POST-INSTALLED ANCHORS

- Post-installed anchors include all mechanical and adhesive anchors noted on Construction Documents. All post-installed anchors shall conform to AC193 for mechanical anchors and AC308 for adhesive anchors.
- Use only code approved anchors with valid ICC-ESR Evaluation Report for use in base material shown on the Construction Documents. Submit ICC-ESR Evaluation Report to Structural Engineer and Special Inspection Agent for approval.
- 3. Installer of post-installed anchors shall be trained by anchor Manufacturer.
- 4. Clean existing concrete surface to solid structural concrete. Grind smooth for full steel contact and to prevent gaps between steel and concrete. Alternatively, provide non-shrink grout in all voids between steel and base material.
- Drill smaller diameter pilot hole in existing concrete and check for existing reinforcing. Do not cut or damage existing reinforcing.
- 6. If existing reinforcing is found, shift hole to avoid existing reinforcing. Submit location of new hole to Structural Engineer
- Install mechanical anchors and adhesive anchors in strict accordance with Manufacturer's written recommendations and procedure detailed in ICC-ESR Evaluation Report.
- 8. Special Inspections are required for all mechanical and adhesive anchors. Inspect and test post-installed anchors as specified in ICC-ESR Evaluation Report.
- 9. Adhesive for rebar and anchors in concrete has been designed based on cracked concrete and seismic applications as applicable, in accordance with ACI 355.4 and ICC-ES AC308. Design adhesive bond strength shall be based on ACI 355.4 Temperature Category A with installation into dry holes, using a carbide drill bit into cracked concrete that has been cured for at least 21 days.
- 10. The following anchors are approved. Submittals for alternative equal anchors will be reviewed by Structural Engineer and approved at their discretion.

Anchor Type:	Approved Anchor	ICC-ESR Report No.	Base Material
Screw Anchors	Hilti Kwik HUS-EZ	ESR-3027 ESR-3056	Concrete Grouted Masonry
Adhesive Anchors	Hilti HIT-HY200 SAFESET Hilti HIT-HY70 + HAS/REBAR Hilti HIT-HY70 + HAS/REBAR	ESR-3187 ESR-3342 ESR-2682	Concrete Grouted Masonry Hollow Masonry

Note: Refer to plan notes, details and/or schedules for diameter of anchor rods or size of rebar used and the embed depth required for post-installed anchors.

FOOTINGS AND FOUNDATIONS

preparation and procedure to follow.

- 1. Contractor shall verify all conditions, including underground utilities and field measurements at job site and report any discrepancies to Owner's Representative.
- 2. Provide necessary sheeting, shoring, bracing, etc. as required during excavations to protect sides of excavations.
- Comply fully with requirements of OSHA and other regulatory agencies for safety provisions.
- 4. Top of spread footing elevations noted on plan are minimum elevations. In all cases, footings are to bear on undisturbed
- natural soils or engineered fill having a minimum net allowable bearing capacity of 2,000 psf.

 5. Sides of foundations shall be formed. All concrete surfaces shall be maintained smooth and vertical. Slope sides of excavations as approved by the Geotechnical Engineer, and clean up sloughing before and during concrete placement. If
- 6. Where footing steps are necessary, they shall be no steeper than one vertical to two horizontal unless noted otherwise.

existing soil conditions warrant earth forming, Geotechnical Engineer shall make recommendations for specific

- Footings shall be centered under columns and walls unless specifically detailed otherwise on the Drawings.
- 8. No footings or slabs shall be placed on or against sub-grade containing free water, frost or ice. Should water or frost, however slight, enter a footing excavation after sub-grade approval, the sub-grade shall be re_inspected by the Geotechnical Engineer/Testing Laboratory after removal of water or frost.
- 9. The Contractor shall provide all necessary measures to prevent any frost or ice from penetrating any footing or slab subgrade before and after placing of concrete until the full building enclosure is completed and heated.
- D. Excavated material shall be legally disposed of off the Owner's property or stored at the site or used for backfilling operations as required in accordance with the Geotechnical Engineer's recommendations and Project Specification
- 11. Contractor shall furnish all required de-watering equipment to maintain a dry excavation until backfill is complete.
- 2. Where new footings are adjacent or abut existing foundations, carefully hand excavate and determine bottom of existing foundation. If different than anticipated, adjust new foundations to match existing. In no case shall the new footing be lower than the existing without protection against undermining such as underpinning or shoring.
- 13. Foundation bearing soils shall be inspected by a qualified Geotechnical Engineer. The testing shall include, but not be limited to, identification of soils at and below the foundation bearing level, and the allowable bearing capacity of these
- 14. A Geotechnical Engineer registered in the State of the Project shall inspect the condition and assure the adequacy of all subgrades, fills, backfills before placement of foundations, footings, slabs and walls. They shall submit reports to the Architect/Engineer describing their investigations, including any non-conforming work.
- The design of foundations, retaining walls, and slab on grade is based on assumed nominal design values for the area and is required to be field verified prior to construction to ensure safety and stability. No information is available at the time of construction document issuance which might indicate the presence of fills, organics, or other deleterious geotechnical conditions which may require significant earthwork/foundation operations to resolve. In order to understand the geotechnical conditions present, a thorough geotechnical evaluation of the site is must be performed. The Design team takes no liability/responsibility for any changes which might occur as a result of the to be furnished geotechnical
- 16. Refer to the geotechnical and civil engineers for site preparation works
- 17. Geotechnical engineer is required to evaluate the local bearing capacity of the soils prior to placement of the concrete foundations.

BACKFILLING

CAST-IN-PLACE CONCRETE

- 1. Do not place backfill against foundation walls designed as supported at top and bottom until basement level and first floor slabs are in place. Shore and/or brace walls as required if backfilling operations are to be carried out prior to placement of floor slabs.
- 2. Place backfill against basement retaining walls designed as cantilevered after concrete has attained design strength
- and before lower level and first floor slabs are in place.

 Where backfill is to be placed on both sides of foundation walls, provide a balanced backfill against foundation walls to

eliminate lateral load effects, or provide necessary temporary lateral support to the top of the wall until permanent support

- is installed.

 4. Backfill material shall consist of clean, well grade granular soils, free of organic material, silt and clay, or as specified in
- the Project Specifications.

 Backfill material shall be compacted to 95% of maximum density, as determined by the Modified Proctor Method (ASTM)

D1557), in lifts not exceeding 6 inches.

- 1. Concrete structural framing has been designed by the Ultimate Strength Method per ACI 318 "Building Code Requirements for Structural Concrete".
- 2. Concrete work shall conform to the requirements of ACI 301, "Specifications for Structural Concrete for Buildings", and ACI 318 "Building Code Requirements for Structural Concrete" except as modified by Structural requirements noted on
- 3. All concrete work shall conform to ACI 201.2R, "Guide to Durable Concrete". Parking structures shall also conform to ACI 362.1R, "Guide for the Design and Construction of Durable Concrete Parking Structures".
- Cement shall conform to ASTM C150 "Specification for Portland Cement" type I or III.
- 5. Concrete aggregates shall conform to ASTM C33 "Specification for Concrete Aggregates".
- 6. Reinforcing shall conform to ASTM A615 grade 60
- Reinforcement shall be fabricated and erected according to the ACI standards: "Details and Detailing of Concrete Reinforcement", ACI 315 and "Guide to Presenting Reinforcing Steel Design Details", ACI 315R.
- 8. Welded wire fabric shall be furnished in flat sheets (rolls not permitted) and shall conform to ASTM A1064 and have a minimum side and end lap of 8 inches.
- Welding of reinforcing steel is prohibited unless specifically detailed. Welding where detailed shall conform to AWS D1.4
- Concrete shall have a minimum 28-day compressive strength as follows:

Foundations: 4,000 psi

Slab-on-grade: 3,500 psi

- Exterior concrete, and interior concrete subjected to freeze/thaw cycles, salt, etc., including walls, shall be air-entrained 6% +/- 1%.
- 12. Concrete shall be normal weight, unless indicated otherwise.
- Contractor shall comply with ACI 301 and ACI 306.1 for cold weather concrete placement and shall protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.
- 14. Contractor shall comply with ACI 301 and ACI 305.1 for hot weather concrete placement.
- 15. The approved materials and mix design shall be fully documented and reviewed by the Testing Agency for full
- compliance. Responsibility for obtaining the required design strength is the Contractor's responsibility.

16. Use of calcium chloride, chloride ions, or other salts in concrete is not permitted.

- 17. Contractor shall tie reinforcing steel securely in place prior to placing concrete and provide sufficient supports to maintain the position of reinforcing within specified tolerances during all construction activities. Inserting dowels into wet concrete is
- Concrete exposed to the freeze thaw and outside the building envelope shall be air entrained per ACI requirements 6% +/-Minimum lap splice shall be Class B per ACI 318.%
- 9. Reinforcing steel shall be placed with the following concrete cover and tolerances unless noted otherwise:
- A. Concrete cast against earth (not formed): 3"

Formed concrete exposed to earth or weather:

a. #5 bars or smaller: 1 1/2"

b. #6 thru #18 bars:

C. Formed concrete not exposed to earth or weather:a. Slabs, joists, and walls, #11 bars or smaller: 3/4

b. Slabs, joists, and walls, #14 bars or larger: 1 1/2"

Beams, columns, pedestals, and tensions ties: 1 1/2"

- D. Clearance between parallel bars in a horizontal layer shall not be less than the bar diameter, 1", or 4/3 d agg,
- E. Clearance between parallel bars in two or more horizontal layers, shall not be less than 1" between layers.
- F. Clearance between longitudinal bars in columns, pedestals, struts, and boundary elements in walls shall not be less than 1.5 times the bar diameter, 1 1/2", or 4/3 d agg, whichever is greater.

+1/2" for sections with dimensions over 8"

- G. Maximum deviation from these requirements shall be: +3/8" for sections with dimensions of 8" or less
- 23. Tie embeds securely in place prior to placing concrete.
- Curing of concrete surfaces shall conform to ACI 308.1 "Specification for Curing Concrete" and ACI 308R "Guide to Curing Concrete".
 Prior to placing concrete adjacent to existing concrete, mechanically roughen, then thoroughly clean and de-grease
- preparation, mixing, and application.

 Non-shrink grout shall conform to ASTM C1107. Grout shall be premixed, non-shrink, non-catalyzed natural aggregate

grout with a minimum 7-day compressive strength of 7,000 psi plastic, 6,000 psi flowable, and 5,000 psi fluid consistency.

existing concrete surfaces. Apply epoxy bonding agent prior to placing fresh concrete. Bonding agent shall be "Sika Armatec 110 EpoCem" by Sika Corporation, or approved equal. Follow all Manufacturer's instructions for surface

STATEMENT OF SPECIAL INSPECTIONS

- SPECIAL INSPECTIONS SHALL BE PERFORMED IN ACCORDANCE WITH THE 2015 MICHIGAN (INTERNATIONAL) BUILDING CODE CHAPTER 17 AND AS MODIFIED HEREIN.

 DESIGNATIONS:

 SI SPECIAL INSPECTOR QUALIFIED WITH DEMONSTRATED COMPETENCE DOCUMENTED BY CERTIFICATIONS FROM RECOGNIZED AGENCIES SUCH AS AWS, ACI, MASONRY INSTITUTE OF MICHIGAN (MIM), ETC., AS SUBMITTED AND APPROVED BY THE BUILDING OFFICIAL. SPECIAL INSPECTOR MAY BE A FIRM WITH MULTIPLE SPECIALISTS AND A PROJECT MANAGER PROVIDING REPORTS.
- TESTING AGENCY QUALIFIED TO TEST AND INSPECT MATERIALS AND ASSEMBLIES. TESTING AGENCY SHALL BE UNDER THE SUPERVISION OF THE SPECIAL INSPECTOR.

 GEOTECHNICAL ENGINEER WHO PROVIDED THE ORIGINAL PROJECT GEOTECHNICAL SOILS INVESTIGATION REPORT.
- SE SPECIALTY ENGINEER RESPONSIBLE FOR DESIGNING ASSEMBLIES SUCH AS PRECAST CONCRETE, STEEL JOISTS, COLD FORMED FRAMING ASSEMBLIES, ETC. SPECIALTY ENGINEER SHALL PROVIDE OBSERVATION OF FABRICATED AND INSTALLED ITEMS OF THEIR DESIGN IN ADDITION TO THE SPECIAL INSPECTION.

 TA, GE AND SE SHALL SUBMIT RECORDS OF THE INSPECTION RESULTS TO THE SI. THE SI SHALL COMPILE AND SUBMIT INSPECTION RECORDS TO THE ARCHITECT/ENGINEER AND BUILDING OFFICIAL. RECORDS SHALL INCLUDE STATEMENTS OF TESTS, WHETHER INSTALLED/FABRICATED ITEM COMPLIES WITH CONTRACT DOCUMENTS, REMEDIAL WORK PERFORMED, RETESTS.

 SI SHALL PROVIDE A DAILY REPORT OF ANY DISCREPANCIES FROM THE CONTRACT DOCUMENTS FOUND ON THE SAME DAY OF THE INSPECTION TO THE ENGINEER OF RECORD. FORMAL REPORTS OF COMPLIANCE CAN FOLLOW BY A MAXIMUM OF 2 WEEKS. SI SHALL PROVIDE AND SIGN FINAL REPORT WITH A SUMMARY OF ALL TESTS PERFORMED AND RESULTS TO THE ENGINEER OF RECORD AND BUILDING OFFICIAL, IN ACCORDANCE WITH SECTION 1704.2.4.
- 6. WHERE FABRICATION OF STRUCTURAL, LOAD BEARING OR LATERAL LOAD-RESISTING MEMBERS OR ASSEMBLIES IS BEING CONDUCTED ON THE PREMISES OF A FABRICATOR'S SHOP. SPECIAL INSPECTIONS OF THE FABRICATED ITEM SHALL BE PREFORMED DURING FABRICATION. SPECIAL INSPECTIONS DURING FABRICATION ARE NOT REQUIRED WHERE THE FABRICATOR MAINTAINS APPROVED DETAILED FABRICATION AND QUALITY CONTROL PROCEDURES THAT PROVIDE A BASIS FOR CONTROL OF THE WORKMANSHIP AND THE FABRICATOR'S ABILITY TO CONFORM TO APPROVED CONSTRUCTION DOCUMENTS AND THE GOVERNING BUILDING CODE. APPROVAL SHALL BE BASED UPON REVIEW OF FABRICATION AND QUALITY CONTROL PROCEDURES AND PERIODIC INSPECTION OF FABRICATION PRACTICES BY THE BUILDING...
- 7. REFER TO SPECIAL INSPECTION SCHEDULES AND GENERAL STRUCTURAL NOTES FOR ADDITIONAL QUALITY CONTROL TESTING AND INSPECTIONS.

SI, TA & GE SHALL BE ENGAGED BY THE OWNER IN COMPLIANCE WITH THE MICHIGAN (INTERNATIONAL) BUILDING CODE.

INSPECTION TASK

1. INSPECT AND TEST ALL POST-INSTALLED MECHANICAL AND ADHESIVE ANCHORS MANUFACTURER'S ICC-ESR EVALUATION REPORT FOR EACH ANCHOR.

STRUCTURAL ENGINEER Metropolitan Structural Engineers & Associates Inc. 422 N. Altadena Ave. Royal Oak, MI 48067 Alexander@mjLamb.net 248-561-2035

STRUCTURAL PLAN NOTES:

- 1. VERIFY IN FIELD ALL CONDITIONS PRIOR TO PROCEEDING WITH NEW WORK, NOTIFY A/E TEAM IMMEDIATELY IF ANY DISCREPANCIES ARE DISCOVERED.
- COORDINATE THE STRUCTURAL DRAWINGS WITH THE ARCHITECTURAL DRAWINGS TO ENSURE THE DESIGN INTENT IS SATISFACTORILY IMPLEMENTED.
- PROVIDE TEMPORARY SUPPORT, SHORING, AND FORMING AS REQUIRED DURING CONSTRUCTION.
- FOUNDATIONS ARE DESIGNED TO BEAR ON NATIVE UNDISTURBED NATURAL SOILS OR ENGINEERED FILLS HAVING A MINIMUM NET ALLOWABLE SOIL BEARING CAPACITY OF
- DO NOT DIG BELOW OR UNDERMINE EXISTING FOUNDATIONS.
- PROVIDE TEMPORARY SUPPORT, SHORING, AND FORMING AS REQUIRED DURING CONSTRUCTION.
- 7. PROVIDE CONSTRUCTION JOINTS AT SLAB TO RAMP TRANSITIONS.
- 8. DO NOT REMOVE ANY TEMPORARY SUPPORTS UNTIL FINAL STRUCTURE IS COMPLETELY
- REFER TO THE ARCHITECTURAL DRAWINGS FOR ALL DIMENSIONS. FOUNDATIONS ARE REQUIRED TO BE APPROXIMATELY CENTERED ON FOUNDATIONS.
- 10. PROVIDE CONTROL JOINTS IN CONCRETE WALLS AT 8'-0" O.C. MAX.
- 11. REFER TO STANDARD DETAILS, GENERAL NOTES, SPECIAL INSPECTIONS, AND DESIGN CRITERIA FOR ADDITIONAL INFORMATION/REQUIREMENTS.

STRUCTURAL DESIGNATIONS:

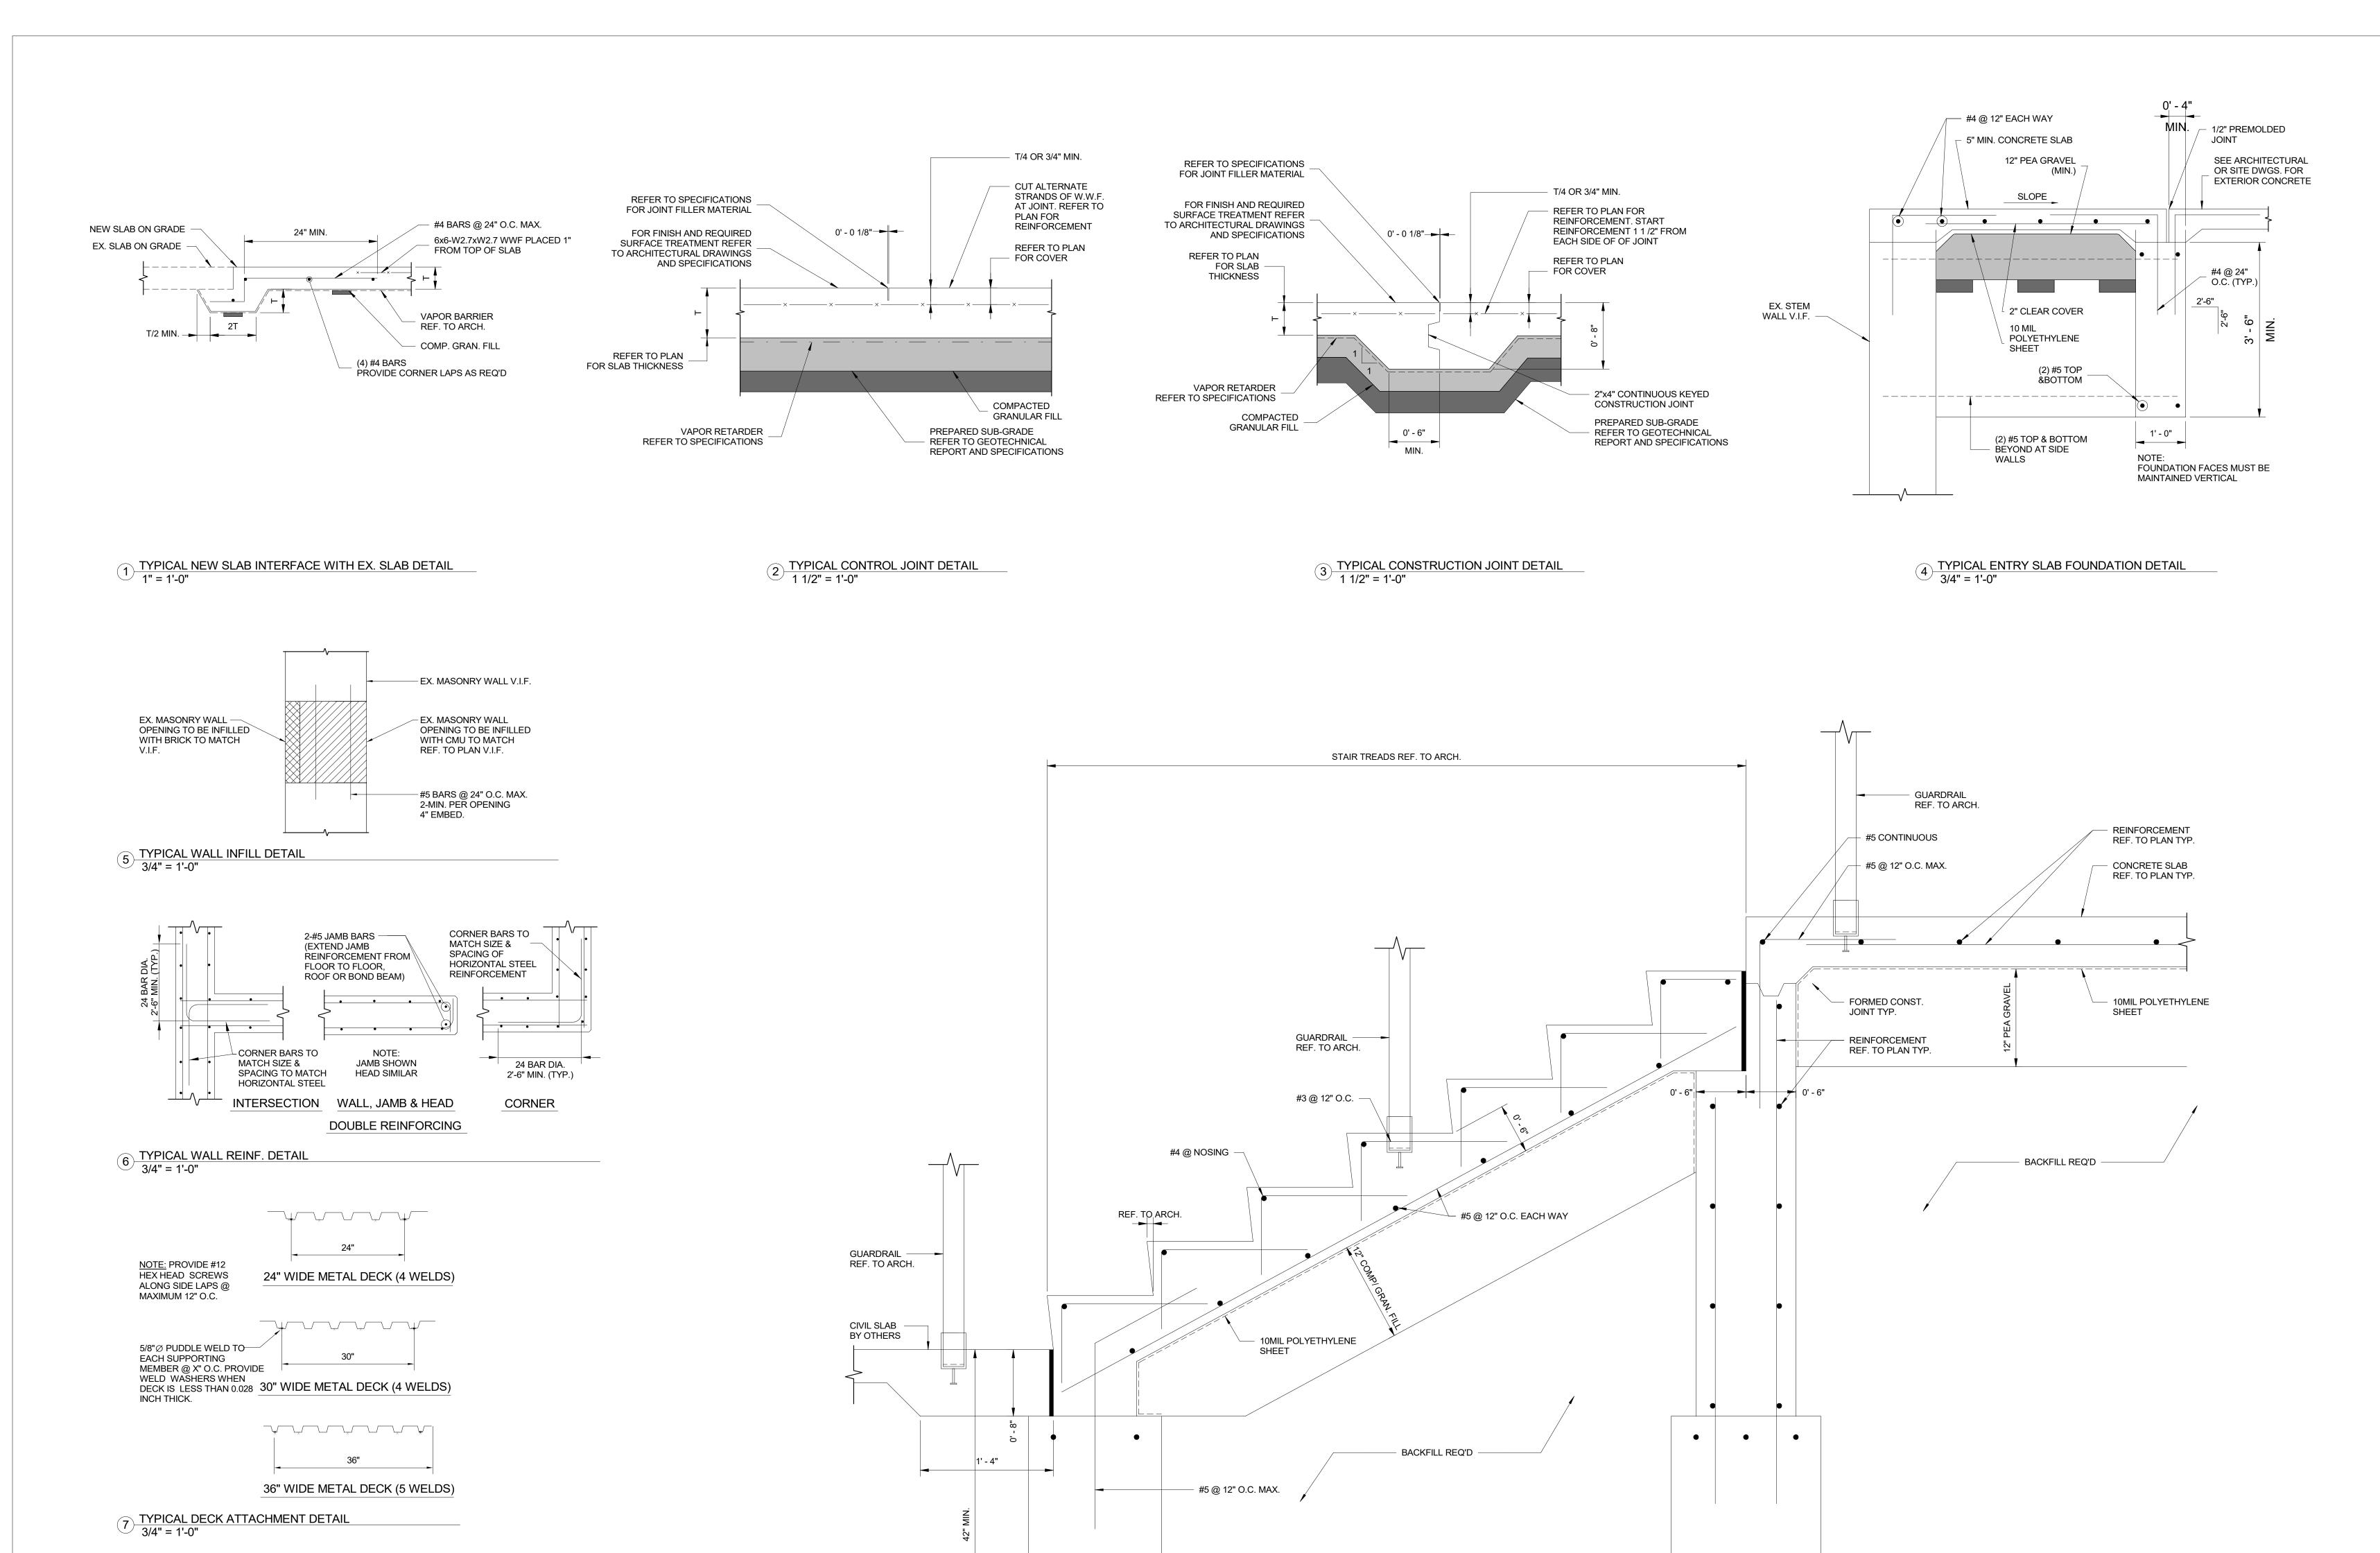

- CW-1: CONCRETE WALL 8" THICK REINFORCED W/ #5 BARS @ 12" O.C. EACH WAY EACH FACE CW-2: CONCRETE WALL - 10" THICK REINFORCED W/ #5 BARS @ 12" O.C. EACH WAY EACH FACE
